WHO ARE PRB SYSTEMS LTD

PRB Systems, the exclusive UK partner to PRB France, was established in 2019. Bringing a new product and brand into a highly competitive market was never going to be easy, however our expert team conquered the world of renders.

Over the past 2 years, we have out grown our expectations. Our contractor and stockist network is continually expanding with PRB being used on sites across the Nation daily. Our external render systems are of high quality, giving modern and traditional houses a beautiful long lasting finish with a 10 year warranty.

MANAGER SE

BRIAN LLOYD
TECHNICAL SALES
MANAGER SW & WALES

WELCOME

BRIAN AND DARREN!

Brian has been part of the Render and EWI industry since 1992, beginning his journey as Technical Advisor, before adding sales onto his day to day in 1993. His most recent employment was with Parex, where he spent 10 years. His success brought him to be involved in one of Wales' largest external wall insulation projects spanning over 60,000 SQM.

Brian prides himself on his technical support and expertise as well as service levels. Ensuring the best advice is always given, always putting the customer and their requirements first.

Darren started his career in the decorating trade at the tender age of 16. Spending the next 5 years painting and decorating which led to branching out into other areas where he learned skills such as carpentry, plumbing, electrics, and flooring. This led to a long term career within property maintenance including retail DIY management and paint manufacturing.

Venturing into the world of renders and external wall insulation systems, Darren worked with PPG and Fassa. Most recently, working for Eco Right as sales manager for lime render products.

DELIGHTED TO
CONTINUE TO BUILD
ON OUR GROWING
STOCKIST NETWORK

A PRB SUCCESS

"We've built a great relationship with the team at PRB Systems. Most recently, we have rolled out the PRO Contractor status for contractors and have already added to this network. PRB materials have been received positively by customers, especially with the addition of the tinting machine which has proved invaluable in being able to offer a fast, bespoke service. Particular products within the range have been commented on as the best they have ever used. The quality of the material speaks for itself, we look forward to a busy 2022!"

Matt Lee, Pentagon Jersey

A Few Words From Our Team

"PRB Systems – investing in people and opening new doors.
It's been a very busy quarter with Darren Burke and Brian Lloyd joining the team.

We have had an exceptional increase in our stockist growth in this last quarter. Recently we have seen an increase in SIG Distribution branches coming on board as PRB stockists, covering major locations of the UK with further branches joining the PRB family shortly.

With the acquisition of Penlaw & Co to the SIG group, our Sales Director Iain Hebborn and Business Development Manager Darren Burke have recently been discussing 2022 and how we can grow the brand awareness and sales with Mark Watson and Brett Sherwin through the Penlaw/SIG network within the London region.

With 2022 around the corner and some big news and new products being launched in the new year, we are extremely excited on what's to come for PRB Systems.

We would like to take this opportunity to thank all of our distributors and contractors that have supported us through 2021 and hope you all have a great Christmas and a prosperous New Year."

Ryan Hill
Managing Director

Iain Hebborn
Sales Director

"We are delighted about the overall growth of PRB in the last quarter compared to the same period last year.

With our growing relationships with both distributor and Installers across the UK and Ireland, we stand in good stead for an exceptional 2022 and beyond.

With some big and exciting news coming next year we have big ambitions which kick starts as soon as we step into the new year."

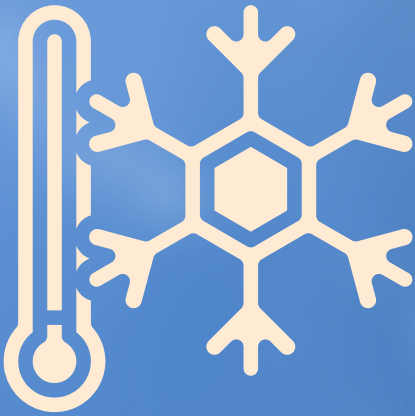

Things are
Looking Orange
this Christmas!

WINTER TIPS

TIPS FOR THE WINTER SEASON

- 1** DO NOT mix or use any render/base coat if the temperature is below 5°C. Always pre plan!
- 2** Protect your substrate! If the elevation is exposed to rain or frost and allowed to become saturated, it will be at greater risk due to movement caused by drying & shrinkage.
- 3** Freshly applied products should be protected from excessively low temperatures, freezing and rain.
- 4** Frost and render don't mix. You should not work with frosted materials, on frosted substrates or apply below the recommended temperature listed on a product's datasheet.
